

Free Intelligent Voice Media Player for RelativityOne and Relativity Server

The Intelligent Voice Free Player for Relativity provides all text-independent features & benefits of the Processed Media Player, for free, for untranscribed media of any amount for both RelativityOne and Relativity Server.

The Free Intelligent Voice Audio / Video Player combines player controls with a navigable waveform with an elapsed time axis, acting as the native view of audio / video files in any Relativity workspace it's been deployed in.

The Free Media Player enables users to navigate to an elapsed time in a recording and then:

1. Skip through any irrelevant speech encountered
2. Skip past any silence or non-speech noise altogether
3. Listen to any relevant speech encountered more quickly
4. Listen to any difficult speech encountered more clearly

Duration determination and corruption detection are also included, for free, for Relativity Search Sets, with media file durations listed in your preferred format or formats in the Document List.

The dedicated User Guide for the Free Player also includes a separate documented Intelligent Culling process to avoid loading collected media that will not be of evidential value.

Use cases for the Intelligent Voice Free Media Player include:

1. Audio / Video that is predominantly non-speech noise and / or silence
2. Matters where set points in a recording must be reviewed
3. Smaller datasets that may not merit keyword searching
4. Early Case Assessment for all manner of cases

Free installation of the Intelligent Voice Free Media Player is available for both RelativityOne and Relativity Server, across all Relativity regions and territories.

Once installed, deployment into individual Workspaces is at your own discretion and control.

All features are available, and in the same manner, for both Relativity Server and RelativityOne.

No need to transcode your media files, or to link your Relativity to any Intelligent Voice account, for the Free Player to work.

Reach out to info@intelligentvoice.com to enjoy faster productivity for audio and video files of any amount, for free, across any and all workspaces.
