

AutoRedaction

**Speed Up Review and
Avoid Costly Mistakes**

Nearly all cases involve responsive documents that contain personally identifiable or confidential information that must be redacted prior to production. Traditional practices require individuals to sift through documents in a review tool and manually create the redaction. This process is tedious, cost-consuming and can result in mistakes that waive privilege, lead to fines or worse. There is a better way!

Built into Relativity®, AutoRedaction by LDiscovery automatically finds and redacts sensitive words, phrases and patterns—like social security numbers and credit cards. Experience the streamlined approach that speeds up review, lowers the cost of redactions and reduces the risk of producing sensitive information.

Speed Up Review

AutoRedaction accelerates the process by applying thousands of redactions in minutes, saving time and money.

Avoid Costly Mistakes

Our automated approach helps ensure you do not miss a critical redaction and promotes consistency across your documents.

Adapts to Your Workflow

It is available when you need it, whether at the beginning of a review or right before document production.

Defensible

Full history, built-in QC workflow and audit trails validate results. Modify, delete and bulk-undo as needed.

Built into Relativity's Interface

To get you started quickly, AutoRedaction contains an extensible library of words, phrases, and patterns that are associated with personally identifiable and sensitive information.
