

OVERVIEW

Nexidia and Relativity Work Together to Integrate Audio and Video Discovery

- **Nexidia's unmatched accuracy**
- **Relativity's web-based platform**
- **Increased efficiencies**

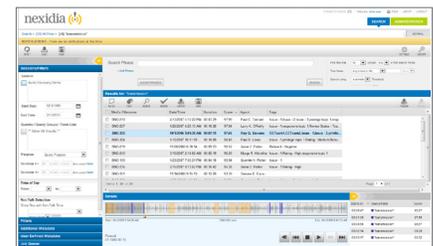

Corporations, law firms, and government agencies have come to rely on Nexidia's Audio Discovery software to analyze, search, and review large volumes of audio and video content in a cost-effective manner. Now using Nexidia's plug-in, regulatory and litigation teams can integrate and manage their most important content in Relativity's web-based discovery platform as well.

HERE'S HOW NEXIDIA & RELATIVITY WORK TOGETHER

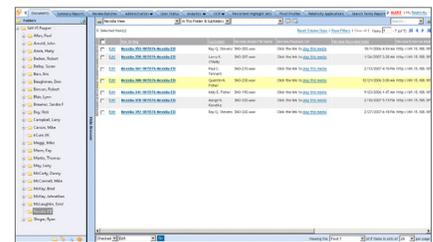

1. Nexidia-trained audio professionals work with you to assist in the collection and evaluation of your audio evidence. File types, call-logging systems, and metadata are among the factors considered before audio and video content is processed using the patented Nexidia phonetic indexing system. Nexidia's ability to quickly process large-scale audio and video projects is unmatched in the industry, and provides the fastest and most accurate searches across large collections of content.

Once processed, your Audio Discovery is available to your review team in a secure, hosted environment.

2. Using Nexidia Search software, your review team can quickly access search terms and listen to relevant files in context. Privilege, relevancy, and annotations are stored with the recordings for future reference. As relevant content is identified, audio content can be moved into Relativity using the advanced Nexidia plug-in, where it can be managed along with other ESI. Using this process, Nexidia is able to weed-out large volumes of non-responsive content and ensure that only relevant data is passed on to the Relativity repository.
3. Through the plug-in, Nexidia creates a record in Relativity that contains all of the file information and any work product that was created in the Nexidia system. Audio files are accessible simply by clicking on a link in Relativity, which launches the Nexidia player and displays the files along with previous search criteria and notations. This advanced process enables users to quickly identify and work with relevant content without having to rerun searches.

RELATIVITY

NEXIDIA & RELATIVITY WORKING TOGETHER FOR YOU

The integration of audio/video into your eDiscovery repository is the next step in providing a single source for handling critical regulatory and litigation matters. Once your audio content is reviewed, the relevant portions are moved into your Relativity repository where you manage your case. You have the best of two compatible and award winning eDiscovery technologies at your fingertips.
