

### Faster review

Coding and removing duplicates at the outset speed up review.

### Consistent coding

Coding and redaction consistency across document-level duplicates within the matter.

### Lower costs

Decreased review volume that leads to cost savings without risking review integrity.

Exact duplicate families and stand-alone documents can be removed using industry standard global deduplication based on MD5 hashes before reaching the review environment. However, global deduplication does not solve the issue of document-level duplicates which reside across families. These duplicates need to be maintained within the family in order to adhere to ediscovery standard practices and to maintain review integrity. As a result of these duplicates in the review universe, coding and redaction inconsistencies repeatedly occur – not to mention the waste of repeatedly reviewing the same documents. This process is highly redundant, inconsistent, expensive, and time-consuming work. Until now, there has been no trustworthy and efficient way to address these document-level duplicates.

## What is ReviewSmart?

ReviewSmart is a first-of-its-kind and purpose-built automated review optimization application by Lighthouse. Offering rapid and efficient disposition of duplicate documents that survive initial family-level deduplication, it accelerates review without risking defensibility. ReviewSmart analyzes a user-defined data set to establish each document as a source or duplicate, sending only the unique source documents for review and redaction. Once review is complete, any coding and redactions can be propagated to the matching duplicates.

Additionally, ReviewSmart analyzes families to flag inconsistencies between document-level duplicates and their families to ensure coding agreement and provides a count of source duplicates to help teams prioritize their workflow.

**ReviewSmart accelerates review by helping you to code and remove duplicates at the outset, often up to 30% of your data set.**

## The Lighthouse difference

For the last 25 years, Lighthouse has been helping organizations manage the increasingly complex landscape of enterprise data for legal teams, experience that you'll see reflected in ReviewSmart. Seeing the need for a complete tool to solve for the challenge with document-level duplicates, we built ReviewSmart to be easy to use while delivering significant time and cost savings. And we know not all cases are the same, so ReviewSmart has the flexibility to choose which coding and redactions are propagated.

## FAQs

**Where does this fit within my review workflow?** Review teams can launch ReviewSmart from the Lighthouse interface within Relativity, seamlessly integrating it into your review workflow.

**What kind of cost savings can I expect?** We have seen potential savings of the value of up to 20 - 30% of document reduction.

**What about security?** ReviewSmart data is managed with the same high security standards as the rest of the Lighthouse offerings. And Lighthouse has the most advanced security in the industry, hands down.
