

Welcome to the Human Side of Tech

## Advanced Text & Chat Data Processing

Today's working environment has driven companies to rely on collaboration tools more than ever before. **Communication Intelligence**, our proprietary text and chat data processing tool alleviates the challenging, inefficient, and error-prone method of reviewing thousands (or even millions) of interspersed text conversations found in forensic report(s).

**Communication Intelligence** works with virtually any data source and is capable of processing content from any device type and chat application regardless of how it's collected. Its powerful processing engine provides comprehensive cross-device threading and deduplication, even in the face of inconsistent contact names and time stamps.

**Communication Intelligence** has been battle-tested on a large number of matters and has delivered consistent performance every time.

## The smart way to review text and chat data from mobile devices, workplace collaboration tools and social media applications.

### Easy to Read Format

Increase review efficiency by formatting social media, text, and chat data in conversational format.

### Keep Related Content Together

Maintain families with embedded images and video to present a complete picture.

### Eliminate Duplicates

Reduce volume with deduplication of messages across devices.

### Navigate Lengthy Conversations

Configurable settings define the start and end of conversations.

### Thread Messages Across Devices

Help simplify review by capturing full conversations into one place.

### Leverage Document IDs

Assign unique identifiers to each conversation for ease of reference.

### View Deletions in Original Context

Recovered deleted messages are displayed in their original location within the conversation.

### Review Platform Agnostic

Results can be loaded to CVLynx/Relativity/RelativityOne (or other review platforms).

## Apply Analytics to Help Resolve Questions

Answer key questions with the advanced data visualization, social network analysis, text analytics, and supervised machine learning features of popular eDiscovery tools.

## See Conversations Clearly

Leveraging an easy-to-read “chat bubble” format helps to naturally review conversations and empower investigations.

## Emoji as Searchable Text

Bolster query, concept clustering and predictive coding results with text definitions of emojis.

## Empower Productions of Conversations

Legal teams can tiff, redact, bates stamp, and brand individual chat bubble conversations or deliver them natively.
