

The Mobile Device Integrator from HaystackID

An Overview of Mobile Device to Relativity Integration for Streamlined Fact Harvesting

With mobile device collections becoming increasingly common in today's eDiscovery and forensics collections, legal professionals require a sound and efficient method to review data collected from mobile devices. Historically, these professionals have had to comb through exhaustive PDF reports or sift through hundreds of thousands spreadsheet records to find facts. HaystackID's Mobile Device Integrator has made importing and reviewing mobile device collections faster and easier than ever, decreasing the time from collection to review and from review to the identification of key case facts.

HaystackID's Mobile Device Integrator demystifies mobile device investigations by streamlining fact harvesting from highly unstructured data formats, all while enabling extracted data to be searched, reviewed, and produced within the industry's leading review platform, Relativity. Mobile Device Integrator also includes visualizations that allow clients to review and produce communications between multiple actors in a contextual timeline around search hits and across multiple applications, making reviewing mobile device collections faster and easier than ever.

Key Features	Description
Search Hit Proximity Threading	Utilizing our proprietary message threading technology, we are able to generate a relational field showing a variable number of messages in chronological order before and after each Search Term Hit Report hit. This proximity allows users to better determine relevance when viewing short messages like SMS.
Automatic Field Type Determination and Creation	During initial processing, Mobile Device Integrator will detect any fields in the Mobile Device Report that do not currently exist in the Relativity workspace. Once detected, it will automatically determine the field type and create the fields in Relativity on-the-fly.
Optional EML Native Format	In addition to our default native format, Mobile Device Integrator allows users to convert cellular messages into EML format which makes the message look similar to normal email. Users have found this format to be easier for new reviewers who may not be as familiar Mobile Device reports.
Processing Support for Non-Standard Data Types	In addition to the default data types that Mobile Device Integrator processes, Mobile Device Integrator will allow users to import these non-standard data types.
XML Field Mapping	Allows users to create an XML field mapping file to ensure accurate field mapping and create a default for handling non-standard data types.

Streamlined Fact Harvesting From Mobile Devices Direct Into Relativity

HaystackID's Mobile Device Integrator provides legal professionals with the industry gold standard for mobile device review through its feature and functionality rich capability to streamline fact harvesting and review.

Key functionality of this gold standard offering for law firms and corporations include:

Key Functionality

- Proprietary Threading of Chats, MMS, and SMS Messages
- Contextual Search
- Excel Record Parsing
- Dedicated Mobile Report Tab View
- Support for Audio, Video, Notes, Voicemail and Image Data Types
- Streamline Production Workflow
- Relational Displays and Consolidated Views
- User-Friendly, Frictionless User Interface
- Automatic Parsing of Other Data Types That Might Exist In a Mobile Device Extraction

With Mobile Device Integrator from HaystackID, legal professionals can streamline fact harvesting from mobile devices with highly unstructured data formats and move mobile device-collected data quickly and intuitively into Relativity for investigation, legal review and production. As a result, investigation and review teams can now take full advantage of the unique identification and collections capabilities of mobile devices and analyze and review potentially relevant evidence in the world's leading review platform, Relativity. This technology combination delivered by HaystackID can decrease review and case cycle times, helping users accelerate accurate and positive outcomes.
