

Save Time and Costs with Automated Privilege Log Creation

Creating a privilege log can be an enormous task without the proper tools. Decisions must be made on what documents to include, names and affiliations need to be brought into a standard format, counsel must be identified and privilege descriptions have to be created and inserted. Accomplishing these tasks across thousands of entries could take weeks.

Thanks to LDiscovery's PrivLog Builder, privilege log woes are a thing of the past. This one-of-a-kind tool has advanced functionality to save time and increase accuracy during the privilege review process. With automated privilege log features, name standardization, and full compatibility with the most popular review platforms, PrivLog users gain a competitive advantage while saving time and money.

Save Valuable Time and Costs

Our PrivLog technology automatically generates privilege log data directly from the document review platform, saving clients valuable time and 50-75% in costs compared to other tools.

Ensure Consistency

Eliminate archaic "find & replace" tasks and ensure privilege log consistency with the ability to standardize names and attorney designations, and apply the normalized data in real-time. PrivLog Builder will also populate your privilege log descriptions directly from your review platform and automatically insert data for the additional fields you specify.

Universal Compatibility

Are you managing a massive review in Relativity? Does your second request fit like a glove with E-Direct? Regardless of which platform is hosting your documents, PrivLog Builder seamlessly syncs data back and forth to ensure your review never skips a beat.

Warning – You Will Be Spoiled!

Once you see how easy and efficient the privilege log process can be with LDiscovery's PrivLog Builder, you will never again drag your knuckles through the tedious and manual process other tools require.
